NEW PENTOSIN ATF 134 TRANSMISSION FLUID

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

Automatic transmission fluid is responsible for powering, cooling, and lubricating the many moving parts of your transmission. Like other fluids in your car's engine, your transmission fluid gradually wears out over time. When your transmission fluid becomes clogged and dirty with debris, it will fail to properly power or lubricate your transmission. Changing your transmission fluid is an important part of regular maintenance and will increase the service life of your transmission.

Completing the recommended interval changes at approximately 50,000 miles can extend the longevity of your car and improve its performance. CRP Automotive offers the latest generation, factory filled transmission fluid specifically for this service.

Pentosin ATF 134

- OE approval on Mercedes spec. 236.14
- Developed to improve shifting comfort for the new generation of Mercedes-Benz NAG-2 Automatic Transmissions (Gen 1 4G-Tronic; Gen 2 5G-Tronic, Gen 3 7G-Tronic)
