NEW PENTOSIN PENTOFROST A1 & A2 PREDILUTED ANTIFREEZE

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

CRP Part No. 8115213

CRP Part No. 8115215

The automotive cooling system is one of the most problem prone components of a vehicle. Nearly 40% of all engines failures are related to the cooling system. The Asian line of Pentosin Pentofrost antifreeze is free of silicate, borate, nitrate, or amine containing additives, making them the ideal antifreeze for Asian vehicles. Plus, they contain phosphates and organic salts to protect all materials used within the cooling system. These fluids are specifically adapted for use in alloy engines and formulated for year-round use.

CRP Automotive proudly introduces Pentosin's latest additions to the line-up of application specific Asian Coolant — Pentofrost A1 and A2 Prediluted antifreeze. Both Pentofrost A1 and A2 are PREDILUTED using the correct amount of deionized water. Pentofrost A1 Prediluted is suitable for all Asian vehicles using “red” antifreeze/coolant and Pentofrost A2 Prediluted is suitable for all Asian vehicles using “green” antifreeze/coolant. Both fluids meet ASTM D-3306 requirements and contain phosphates and organic salts to protect materials used in the cooling systems for Asian vehicles. They are mixable with all phosphate OATs. Other great Pentosin Asian antifreezes include Pentofrost A1 Concentrate, A2 Concentrate, A3 Prediluted, and A4 Prediluted.
