## REIN STARTER BOLT KIT FOR BMW

Data available through Activant/Epicor, WHI, or [ShowMeTheParts.com](http://ShowMeTheParts.com)

CRP Part No. HWK0039

BMW N51/N52 engines use torque-to-yield aluminum bolts to secure and ground the starter to the engine. Since the average age on these vehicles is 8 years, it is likely that a replacement starter will be required maintenance. Since the bolts used to mount the starter are aluminum torque-to-yield bolts, they cannot be reused and must be replaced along with the starter.

There are choices available for replacement bolts in the aftermarket, but you must be careful when sourcing them. Since these bolts are also responsible for grounding the starter, it is very important that the bolts have the correct resistance. If they do not, you risk having the possibility of a no-start condition. The Rein Automotive starter bolt kit for BMW is sourced from an OE manufacturer so you can rest assured that these bolts will correctly secure the starter to the engine and properly ground it, making sure you don't run into any issues. In addition, each of the Rein Automotive starter bolt kits comes packaged with instructions that include the torque procedure to ensure they are installed properly.
