## **NEW PENTOSIN PENTOFUID EHF HYDRAULIC FLUID**

*Data available through Activant/Epicor, WHI, or [ShowMeTheParts.com](http://ShowMeTheParts.com)*

For decades, professional repair technicians have relied on Pentosin's OE First Fill CHF 11S and CHF 202 hydraulic power steering fluids. The CHF fluids have been on the market since 1983 and continue to be asked for by name. However, there have been some requests for a "recommend for" fluid option for older vehicles.

Pentosin is pleased to introduce a new formulation for the price-sensitive customer: Pentofluid EHF. Pentosin is the only fluid brand with OE approval for BMW, Volkswagen, and Audi hydraulic fluid. This makes Pentofluid EHF the perfect option for a customer with an older vehicle with hydraulic power steering who wants a high quality fluid at a competitive price.

It is important to note that a vehicle using CHF 11S or CHF 202 can be "topped off" with Pentofluid EHF but "topping off" an OE formulation will slightly lessen the original's performance. When switching fluids, it is recommended that full flush is performed and then refilled.

**CRP Part No. 1405115 (1L)**

### **FEATURES & BENEFITS:**

- For multiple Audi, Bentley, BMW, Chrysler, Dodge, Hyundai, Jaguar, Jeep, Land Rover, Mercedes-Benz, MINI, Porsche, Rolls-Royce, Saab, Volkswagen, and Volvo applications
- Designed to be an economical alternative to the OE First Fill hydraulic fluids
- Ideal for cold weather climates
- Works perfectly under extreme temperature fluctuations
- Over 15 million total VIO (US and Canada)
