REIN TRANSFER CASE FLUID

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

CRP Part No. FLDF001 (1L)

Changing the transfer case fluid on a vehicle is important to ensure optimal vehicle performance. Transfer case fluid removes heat and lubricates the internal parts in the transfer case which keeps the gears cool and turning smoothly. Over time, the fluid can become contaminated and could cause failure of the differential. Routine changing of transfer case fluid can help to alleviate larger vehicle issues.

Rein TF 0753 is an OE high performance transfer case fluid for Land Rover applications. This is the second OE automotive fluid from Rein Automotive. Rein TF 0753 provides optimum performance under the most severe operating conditions. This fluid offers excellent oxidative stability, superior low temperature fluidity, good shear and friction stability, and has excellent thermal properties. Rein TF 0753 fluid is available from CRP Automotive in 1 liter bottles, with 12 per case and 480 per pallet.
