REIN FORD TRANSIT CONNECT COOLANT HOSES

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

Due to the high level of global platforms and production that is leveraged by major vehicle manufacturers, it is becoming more common to find parts for what is thought of as a domestic vehicle produced in other regions. One such vehicle is the Ford Transit Connect, produced in Europe from 2010-2013 and exported to the US and Canada. Since many of CRP Automotive's manufacturing partners are located in Europe, we have access to these products unlike many of our domestic competitors.

Rein Automotive now offers 8 SKUs for 2010-2013 Ford Transit Connect models with the 4 cyl. 2.0L engine, the version most widely sold in our market during that time. These hoses have been sourced from our global partners and are manufactured by the OEM. Like a variety of hoses in the Rein coolant hose category, many of these have plastic pipes, T-fittings, and quick connectors that are prone to failure. These new hoses are similar to the coolant hose and coolant hose assemblies that make up a large portion of the offering we carry for European vehicles.

FEATURES & BENEFITS:

- Manufactured by the OEM, direct replacement for OE hoses – includes all components and branches
- OE-quality hoses and assemblies – perfect for fleet vehicles and those that are depended upon daily
- All clamps needed for installation are included with each hose/assembly
