May 14, 2021

REMANUFACTURED AUDI EPS RACKS

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

Looking for an alternative solution to paying dealer price? AAE, brought to you by CRP Automotive, now offers remanufactured electric power steering racks for popular Audi A4, A5, ALLROAD, S4, S5, and Q5 models. Through our extensive research and development, we are excited to offer these first-to-market European applications.

Each unit goes through multiple repair and inspection steps, including a check for water ingress, which is one of the most common failures causing the rack to lock up. All internal seals and gaskets are replaced and new bellows and clamps are installed. The ECU plug connector and the torque sensor harness are inspected and replaced if necessary. A new heat shield mat is also installed to replace the worn out OE one. The Power Steering Control module is then electronically tested for any fault codes which may prevent proper operation.

FEATURES & BENEFITS:

- Replacement for option QZ7- Standard power steering (not for 1N8- Dynamic power steering)
- Replacement for Component RCEPS (not for RCEVO)
- These steering racks use CAN communication
- After installation, follow mandatory steps to calibrate the torque and steering angle sensors
- Additional coding may be required depending on the vehicle trim level and features
