## REIN COOLANT SYSTEM LUBRICANT

Data available through Activant/Epicor, WHI, or [ShowMeTheParts.com](http://ShowMeTheParts.com)

Installing components such as coolant hoses, exhaust hangers, or steering/axle boots on modern vehicles can be a challenging task for professional repair technicians. The leverage required for the installation of components such as those with quick-connect fittings or others in confined spaces can cause difficulties for anyone.

Rein Automotive now offers a new first-to-market installation lubricant (CRP Part No. FLLB004) for those seeking a solution to the installation challenges of these components. This new lubricant is designed for use with coolant system hoses, with or without quick-connect fittings, as well as elastomers like exhaust mounts, steering/axle boots, and O-rings. Rein's installation lubricant streamlines the installation process and minimizes the pressure required, reducing the likelihood of components becoming damaged due to excessive force.

### FEATURES & BENEFITS:

- Highly effective lubricating film for use on all makes and models
- Neutral with most elastomers
- Water-miscible
- Environmentally friendly

CRP Part No. FLLB004
