Transmission fluid services are an important part of regular maintenance and will increase the service life of your transmission. According to the Automatic Transmission Rebuilders Association, 90% of automatic transmission failures are caused by overheating and can be often blamed on transmission fluid that should have been replaced. Completing the recommended interval changes at approximately 50,000 miles can extend the longevity of your car and improve its performance. CRP Automotive has created a kit designed specifically for this service by bringing together two of our great brands – Pentosin, OE approved fluid (ATF 1) and Rein Automotive.

About Pentosin ATF 1:

- OE approved
- Long-life fully synthetic high performance automatic transmission fluid (ATF) – designed for lifetime application in automatic gear boxes.
- High performer shear stable VI-improver that guarantees a sound stable friction performance in modern automatic transmissions equipped with an electronically controlled converter clutch.
- 16 million VIO North America

About Rein Filters:

- OE quality filter material traps contaminants and prevents premature transmission failure.
- OE quality gaskets ensure proper seal and prevent leaks.
