REIN TECHSELECT TURBO KITS

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

As many vehicle manufacturers are turning to turbocharging to meet emissions regulations and efficiency goals, the demand for turbocharger system servicing and the components related to the job is growing rapidly. When these vehicles reach higher mileages, many components within the turbocharger system begin to wear and require replacement. Most turbocharger components cannot be reused due to exposure to extreme temperatures and constant heat cycling. Common issues include hoses leaking or becoming clogged, old gaskets and seals needing replacement, and hardware including nuts, studs, and clamps could become the weak links if reused. In the past, the professional repair technician needed to source all components individually to perform a turbocharger replacement service.

CRP Part No. TRK0007

CRP Automotive now offers eight **first-to-market** Rein-branded TechSelect Turbo Kits for this turbocharger replacement service on popular BMW applications. The new TechSelect Turbo kits include the hoses, gaskets, and hardware needed to successfully perform the job effectively in both time and cost.

FEATURES & BENEFITS:

- First-to-market solution kits featuring direct replacement components for OE parts to ensure optimal performance
- Kits contain the most recent versions of each hose, ensuring that all turbo fluid hoses are up to date
- Hoses include brackets, hardware, and necessary sealing components
- Hardware is designed and manufactured to withstand the rigorous operating environment of turbocharger systems
