REIN COOLANT HOSE METAL CONNECTOR FOR BMW

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

CRP Automotive now offers two versions of the upgraded Rein Coolant Hose Metal Connector (CRP Part Nos. CHU0940 & CHK0940), designed for BMW B58 6 Cyl. 3.0L engine applications. The CHU0940 version features the upgraded aluminum connector and necessary gasket, while the CHK0940 version also includes the temperature sensor for easy installation.

Feedback from the CRP Automotive Innovation Council identified the OE plastic connector as a common failure point on these engines due to brittleness and cracking caused by repeated thermal cycling and hydrolysis. Hydrolysis occurs when water breaks down plastic or rubber, leading to structural degradation and eventual failure. The upgraded Rein connectors are constructed from durable aluminum to address these issues and eliminate common failure points.

FEATURES & BENEFITS:

- **Direct OE Replacement:** Ensures hassle-free installation.
- **Two Versions Available:** Choose between the CHU0940 (connector and gasket only) or CHK0940 (connector and gasket with temperature sensor) to fit your installation needs.
- **Upgraded for Durability:** Aluminum construction provides superior resistance to cracking, brittleness, and damage caused by thermal cycling and hydrolysis.
- **Longer Service Life:** Upgraded materials and construction reduces the frequency of replacements and overall maintenance costs.

Part No. CHU0940
(connector & gasket)

Part No. CHK0940
(connector & gasket plus
temperature sensor)

**Example of Plastic Connector
Damage from Hydrolysis**
