REIN UPGRADED COOLANT METAL PIPE FOR MINI

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

CRP Automotive now offers an upgraded Rein Coolant Metal Pipe (CRP Part No. CHU0589) for popular MINI 4-cylinder 1.6L engines.

Based on feedback from members of the CRP Automotive Innovation Council, we identified a common issue with a component in modern MINI 4-cylinder 1.6L engines. The OE version of this MINI pipe is made of plastic, which becomes brittle over time and is prone to cracking at multiple points. These failures are often caused by repeated thermal cycling and hydrolysis. To address this, the upgraded Rein pipe is constructed from aluminum, providing a more durable alternative to the OE part and eliminating common failure points. Additionally, the Rein version includes the necessary O-ring and clip for a complete installation.

CRP Part No. CHU0589

FEATURES & BENEFITS:

- Direct replacement for the OE pipe to ensure hassle-free installation
- Made of aluminum to offer increased durability compared to the OE part
- Upgraded materials and construction provide a longer service life compared to the original part, reducing the frequency of replacements and maintenance costs
- Includes necessary O-ring and clip for easy installation
