REIN UPGRADED COOLANT FLANGE REPLACEMENT KIT

Data available through Activant/Epicor, WHI, or ShowMeTheParts.com

CRP Automotive now offers a new **Rein Upgraded Aluminum Coolant Flange Replacement Kit** (CRP Part No. CHU1648) for 2005-2009 Audi A4/A4 Quattro models with 2.0L engines. This kit is built with direct-fit, premium components to provide a complete and convenient solution for a typically time-consuming repair.

The OE plastic coolant flange is mounted directly to the cylinder head and commonly fails due to repeated thermal cycling, which can lead to warping, cracking, and coolant leaks. The Rein kit addresses all critical components involved in this repair and features an upgraded, more durable aluminum flange (CRP Part No. CHU0648) for extended service life. The kit's replacement hoses feature premium rubber compounds and include factory-style quick-connect fittings to ensure secure installation.

CRP recommends replacing compromised cooling components as a system and performing a full coolant flush using a high-quality coolant. Pentosin Pentofrost E 50/50 Prediluted Antifreeze (CRP Part No. 8114306) is the preferred choice for this application and helps protect against corrosion and deposit buildup. Rein solution kits offer a "Fix-It-Right-the-First-Time" approach to restore long-term cooling system performance.

Part No. CHU1648

Part No. CHU0648

FEATURES & BENEFITS:

- Provides all required components in one kit, helping technicians complete the repair efficiently without sourcing individual parts
 - Direct-fit components include factory-style heater hose and/or radiator hose, thermostat assembly, vacuum pump gasket, water hose, and upgraded aluminum flange
- Upgraded aluminum flange (P/N CHU0648) replaces the original plastic part to improve durability and prevent future failures
- Supports a system-based repair approach to reduce comebacks and extend the service life of the cooling system
