AAE DIFFERENTIAL LOCK ACTUATORS

AAE ISN'T JUST STEERING ANYMORE

AAE, a CRP Automotive brand, has built its reputation as a trusted leader in steering products. Now, AAE is expanding into drivetrain components with the introduction of a new **14-SKU program of Differential Lock Actuators, AWD Coupling Oil Pumps, and Differential Oil Pumps** for domestic and import vehicles.

Built for Modern AWD Systems

Many front-biased on-demand AWD systems rely primarily on the front wheels during normal driving, then engage the rear axle when additional traction is needed in conditions such as rain, snow, or mud. Depending on the application, these components help engage or disengage the rear axle, control AWD coupling operation, or manage differential engagement and torque transfer.

100% New, OE-Quality Components

AAE units are **100% new with no core charges** and are manufactured with OE-quality components. Each unit is designed as a direct replacement for the failed original component and undergoes thorough inspection and testing procedures to verify proper operation and fitment.

Supporting a Complete Repair

When servicing these components, it is recommended to replace the applicable AWD or differential fluid, inspect seals and gaskets for leaks or damage, and scan the vehicle to clear applicable fault codes after installation. These steps help support proper system operation and a more complete repair.
